

## DESIGN

- Design features 15 helix tubes constructed of Spunbond Polyester media laminated with ePTFE
- Multiple tube design increases surface area over similarly-sized envelope-style bags by 25%, effectively lowering the Air-to-Media Ratio
- Support cores inserted into outermost tubes with option for additional support cores for increased stability
- Reusable venturi is sold separately

## FEATURES

- Up to 180° F continuous use
- Decreased Air-to-Media Ratio results in lower pressure drop and longer life
- Smooth surface of Spunbond Polyester and ePTFE membrane yields excellent dust release characteristics
- Advanced media is more efficient in capturing submicron dust particles (0.3 micron and larger), resulting in lower emissions
- Cleaner air, longer filter life, and greater cost savings
- Can be used in new installations or as a replacement filter for Donaldson Dalamatic bag and cage filter assemblies
